

DEDICATED SERVER MANAGEMENT CARD
WITH HOT SWAP FUNCTIONALITY

Abstract of the Disclosure

5 A server system includes a plurality of printed circuit assemblies including at least one host processor card. A management card is coupled to the plurality of printed circuit assemblies. The management card is dedicated to monitoring and managing operation of the server system, including monitoring and managing on-line insertion and removal of the printed circuit assemblies in a compact peripheral component interconnect (cPCI)
10 server system.
